

HOW TO USE OUR MOCKUPS

Quick guide on how to use the mockups created by designalot.net

This guide is useful for both the FREE mockups you may have downloaded from our website and the PREMIUM ones you may have bought from marketplaces like: CreativeMarket, Sellfy or GraphicsRiver.

All our mockups are based on smart objects, a function that gives the ability to change the designs on Photoshop files fast and easy. Here are some quick steps that apply to most of our mockups:

1. Open the PSD file from the file you downloaded (you might have to extract it from the ZIP file)
2. Once there, look for a layer that might be called “Logo here”, “Artwork here”, “Replace Logo” or anything similar, and double click the left icon of it.
3. Now a new file has opened. Here you should delete any old designs and place yours. Now save and exit.

That's it! Now your logo/design/artwork should be place on the mockup!

PS: Some mockups might have options to save the body colors of the elements (like t-shirts, cans, apparel accessories etc.) - to change those, look for a “Change Color”, “T-Shirt Color” - or anything similar - group or layer, and change it's colors (it may be a Layer Effect or just a Shape).

If you have any questions, feel free to email me at office@designalot.net and I will come back with an answer as soon as possible.

Thank you for using our mockups!
